

E-commerce Operations, Listing Optimization & Support

Portfolio overview for TikTok Shop and marketplace listing support

I support e-commerce sellers with structured product listing, catalog management, backend coordination, and quality control. With an academic background in BSc and MSc in Statistics, I combine operational execution with analytical thinking to improve listing quality, reduce errors, and support stronger marketplace performance.

10,000+ successful product listings managed and published	TikTok Shop focused experience in new product listing workflows	Data-driven optimization mindset shaped by statistics training
--	--	---

Core Responsibilities

- Product upload and listing support across e-commerce marketplaces
- Title, description, image, attribute, and variation management
- Backend coordination and routine store operations
- Listing corrections, quality assurance, tracking, and reporting
- Keyword research for better listing visibility and discoverability

Listing Criteria I Consistently Followed

- Verified whether the product was allowed to be listed and checked for category restrictions, approval needs, or compliance requirements
- Selected the most accurate category to protect visibility, relevance, and policy alignment
- Used the brand field correctly for branded and unbranded products
- Created clean, accurate, and policy-safe titles without keyword stuffing or misleading wording
- Prepared clear product descriptions and reviewed listing content for accuracy and buyer usefulness
- Checked product images for quality, clarity, and correct representation of the item
- Handled attributes, variants, SKUs, price, stock, and shipping details with consistency
- Reviewed listings for content-policy risks, mismatch issues, and submission errors before publishing

Analytical Approach

A product should be understood before it is sold. I focus on product use case, buyer intent, positioning, and keyword relevance before building the listing.

Not every feature is equally important. I prioritize the features that actually influence buying decisions instead of treating all details the same.

One variable rule. I avoid changing everything at once, so improvements can be observed and evaluated more logically.

Not every product is equally sellable. I pay attention to product-market fit and marketplace potential instead of assuming every item will perform the same.

Why Clients Get Better Results Working With Me

- More structured and compliant product listings
- Cleaner catalog organization and stronger listing consistency
- Reduced rejection, mismatch, and quality-control issues
- Keyword-focused listing support for better discoverability
- Reliable backend execution that helps stores scale more smoothly

Best suited for sellers who need accurate listing execution, catalog cleanup, listing optimization, and dependable marketplace support.
